# Table of Contents

**Introduction: Manufacturing in Alberta**

**Section 1: Alberta Manufacturing Firms** 1

In this section the manufacturing firms of the province are listed alphabetically. Types of products are given and approximate size of firm indicated by simple letter code.

**Section 2: Alberta-made Products** 84

Products of manufacturing plants and the names and location of the firms producing the specific products are listed alphabetically. Actual postal address may be obtained by referring to Section 1.

**Section 3: Alberta Firms by Location** 131

This section lists firms by census divisions and by towns. For information on manufacturing firms in any given town, consult this section first to locate the census division in which the town is situated and then refer to the main listing in Section 1.

*Information in Sections 1, 2, and 3 is based on a survey conducted by the Alberta Bureau of Statistics in 1981.*

# Manufacturing in Alberta

Expansion of the manufacturing sector has long been an important part of Alberta's policy of economic diversification. This goal is being realized as the value of manufacturing shipments, an indicator of manufacturing activity, continues to grow. In a somewhat dramatic fashion the value of manufacturing shipments has grown by an annual average rate of over 20 per cent since 1977 when it was $6.0 billion. The estimated value in 1981 amounted to $12.96 billion, in itself a 22.6 per cent increase over the previous year.

Alberta has a number of distinct advantages as a manufacturing centre: population growth in Alberta and Western Canada continues to provide a larger and more affluent consumer market, the corporate tax rate is the lowest in Canada, the province has one of Canada's largest financial centres, a highly trained labour force, and an assured supplv of competitively priced hydrocarbon resources that is attractive to industry. Factors such as these have enabled Alberta to increase its share of total Canadian manufacturing shipments from 5.5 per cent in 1977 to 6.9 per cent in 1981.

Export sales to international markets point to the importance of manufactured goods in Alberta's economy. In 1981 exports of manufactured goods totalled $3.38 billion, just over one-third of Alberta's $9.44 billion in exports to international markets. Alberta Government representatives presently located in Tokyo, Hong Kong, Los Angeles, Houston, New York and London, coupled with international marketing and trade development services offered in the province by the Department of Economic Development help support business efforts by the private sector in foreign markets.

The growing importance of secondary industries is an encouraging trend away from Alberta's traditional economic base of primary industries and agriculture. Provincial government policy encourages the manufacturing industry throughout Alberta in order to reduce import volumes, provide additional benefits to Albertans through increased economic activity and to decentralize as much as possible from main population centres. It is anticipated that these government policies, in conjunction with the wealth and diversity of Alberta's human resources, will result in continued high levels of investment, economic prosperity and growth and diversification of Alberta's manufacturing activities.

## Petroleum-based Industries

Petroleum-based industries in Alberta represent the largest segment of the manufacturing sector. During 1981 these industries shipped $4.18 billion worth of goods accounting for about a third of Alberta's total manufacturing shipments. The value of manufacturing shipments of the petroleum products industry amounted to $2.84 billion in 1981 representing a 37 per cent increase over the 1980 level. During the same year the chemical and chemical products industry shipped $1.35 billion worth of goods.

## Food and Beverage Industries

The food and beverage industry was the leading manufacturing sector in Alberta until overtaken by petroleum-based industries in 1980. The industry share of manufacturing shipments dropped from 29 per cent in 1980 to 26.5 per cent in 1981 despite a 12 per cent increase to $3.43 billion. The smaller share was attributable to greater expansion in other industry groups.

## Metal-based and Transportation Equipment Industries

The metal industries are comprised of four separate industry groupings. The largest are the primary metal and metal fabricating industries with manufacturing shipments of $796 and $791 million respectively. Machinery (excluding electrical machinery) is an important facet of Alberta's manufacturing output with $667 million in shipments. Together with transportation equipment the metal-based industries total $2.51 billion in manufacturing shipments for a 19.3 per cent share of the Alberta total; growth in this industry was 24 per cent in 1981.

## Forest Products

Alberta's forest products and their manufacturers represent manufactured shipments of $1.09 billion, or 8.5 per cent of the manufacturing output. The largest industry component in this category is the wood industries which include all wood processing from sawmills to woodframe prefabricated home construction; shipments in 1981 were valued at $576 million. Paper and allied products contributed $376 million to the manufacturing output while furniture and fixtures accounted for $143 million.

## Other Manufacturing Industries

Shipments of non-metallic products continue to grow rapidly; its estimated value went up $134 million in 1981 to $704 million. The value of shipments in the printing, publishing and their allied industries totalled $450 million while shipments of electrical products were valued at $118 million. The textile and miscellaneous manufacturing industries both grew significantly in 1981, their shipments totalling $203 million. Miscellaneous manufacturing industries include scientific and professional equipment, jewelry and silverware, sporting goods and toys, signs and displays and other manufacturing groups.

The other manufacturing groups are those that are not published by Statistics Canada due to reasons of confidentiality; they are the rubber and plastic, leather, knitting and clothing industries, whose combined shipments totalled $262 million in 1981.

## Estimated Value of Manufacturing Shipments

**Alberta 1980 - 1981**

| | 1980 | | 1981 | |
|---|---|---|---|---|
| | $'000 | % | $'000 | % |
